Bibliographic Citation:

Publications based on ICPSR data collections should acknowledge those sources by means of bibliographic citations. To ensure that such source attributions are captured for social science bibliographic utilities, citations must appear in footnotes or in the reference section of publications. The bibliographic citation for this data collection is:

Request for Information on Use of ICPSR Resources:

To provide funding agencies with essential information about use of archival resources and to facilitate the exchange of information about ICPSR participants' research activities, users of ICPSR data are requested to send to ICPSR bibliographic citations for each completed manuscript or thesis abstract. Visit the ICPSR Web site for more information on submitting citations.

Data Disclaimer:

The original collector of the data, ICPSR, and the relevant funding agency bear no responsibility for uses of this collection or for interpretations or inferences based upon such uses.

Responsible Use Statement:

In preparing data for public release, ICPSR performs a number of procedures to ensure that the identity of research subjects cannot be disclosed. Any intentional identification or disclosure of a person or establishment violates the assurances of confidentiality given to the providers of the information. Therefore, users of data obtained from the ICPSR archive and/or any of its special topic archives agree:

- To use these datasets solely for statistical analysis and reporting of aggregated information, and not for investigation of specific individuals or organizations, except when identification is authorized in writing by ICPSR

- To make no use of the identity of any person or establishment discovered inadvertently, and to advise ICPSR of any such discovery

- To produce no links among ICPSR datasets or among ICPSR data and other datasets that could identify individuals or organizations

Redistribution:

ICPSR data may not be redistributed or sold to other individuals, institutions, or organizations without the written agreement of ICPSR.

# Bibliographic Description

ICPSR Study No.: 4466

Title: Uniform Crime Reporting Program Data [United States]: County-Level Detailed Arrest and Offense Data, 2004

Principal Investigator(s): United States Department of Justice. Federal Bureau of Investigation

Series: Uniform Crime Reporting Program Data [United States] Series

Bibliographic Citation: U.S. Dept. of Justice, Federal Bureau of Investigation. UNIFORM CRIME REPORTING PROGRAM DATA [UNITED STATES]: COUNTY-LEVEL DETAILED ARREST AND OFFENSE DATA, 2004 [Computer file]. ICPSR04466-v1. Ann Arbor, MI: Inter-university Consortium for Political and Social Research [producer and distributor], 2006-06-19.

# Scope of Study

Summary: This data collection contains county-level counts of arrests and offenses for Part I offenses (murder, rape, robbery, aggravated assault, burglary, larceny, auto theft, and arson) and counts of arrests for Part II offenses (forgery, fraud, embezzlement, vandalism, weapons violations, sex offenses, drug and alcohol abuse violations, gambling, vagrancy, curfew violations, and runaways).

Subject Term(s): aggravated assault, alcohol, arrests, arson, assault, auto theft, burglary, counties, crime rates, crime reporting, crime statistics, drug abuse, embezzlement, forgery, fraud, illegal gambling, larceny, law enforcement, murder, offenses, rape, robbery, sex offenses, Uniform Crime Reports, vagrancy, vandalism, weapons offenses

Geographic Coverage: United States

Time Period: 2004

Date(s) of Collection: 2004

Universe: County law enforcement agencies in the United States.

Data Type: aggregate data

Data Collection Notes: (1) Two major changes to the Uniform Crime Reports (UCR) county-level files were implemented beginning with the 1994 data. A new imputation algorithm to adjust for incomplete reporting by individual law enforcement

jurisdictions was adopted. Within each county, data from agencies reporting 3 to 11 months of information were weighted to yield 12-month equivalents. Data for agencies reporting less than 3 months of data were replaced with data estimated by rates calculated from agencies reporting 12 months of data located in the agency's geographic stratum within its state. Secondly, a new Coverage Indicator was created to provide users with a diagnostic measure of aggregated data quality in a particular county. Data from agencies reporting only statewide figures were allocated to the counties in the state in proportion to each county's share of the state population. (2) In the arrest files (Parts 1-3 and 5-7), data were estimated for agencies reporting zero months based on the procedures mentioned above. However, due to the structure of the data received from the FBI, estimations could not be produced for agencies reporting zero months in the crimes reported files (Parts 4 and 8). Offense data for agencies reporting one or two months are estimated using the above procedures. Users are encouraged to refer to the codebook for more information. (3) No arrest data were provided for Florida. Limited arrest data were available for Illinois and Kentucky. Limited offense data were available for Illinois, Kentucky, Mississippi, Montana, and South Dakota. (4) UCR program staff at the Federal Bureau of Investigation (FBI) were consulted in developing the new adjustment procedures. However, these UCR county-level files are not official FBI UCR releases and are being provided for research purposes only. Users with questions regarding these UCR county-level data files can contact the National Archive of Criminal Justice Data at ICPSR.

## Methodology

Mode of Data Collection: self-enumerated questionnaire

Extent of Processing: CDBK.ICPSR/ DDEF.ICPSR/ MDATA.ICPSR/ RECODE/ UNDOCCHK.ICPSR

## Access and Availability

Extent of Collection: 8 data files + machine-readable documentation (PDF) + SAS setup files + SPSS setup files

Data Format: Logical Record Length with SAS and SPSS setup files

Note: Detailed file-level information (such as LRECL, case count, and variable count) may be found in the file manifest.

Dataset(s): • DS1: Arrests, All Ages

- DS2: Arrests, Adult
- DS3: Arrests, Juveniles
- DS4: Crimes Reported
- DS5: Allocated Statewide Data for Arrests, All Ages
- DS6: Allocated Statewide Data for Arrests, Adults
- DS7: Allocated Statewide Data for Arrests, Juveniles
- DS8: Allocated Statewide Data for Crimes Reported

INTRODUCTION

APPENDIX

ICPSR DATA COLLECTION DESCRIPTION

The UNIFORM CRIME REPORTING PROGRAM DATA [UNITED STATES]: COUNTY-LEVEL DETAILED ARREST AND OFFENSE DATA, 2004 reports counts of arrests and offenses for the Uniform Crime Reports (UCR) index (Part I) crimes: murder, rape, robbery, aggravated assault, burglary, larceny, auto theft, and arson. The UCR County-level Arrest files also report arrests for additional (Part II) crimes such as forgery, fraud, vice offenses, and drug possession or sale. The data were originally collected by the Federal Bureau of Investigation (FBI) from reports submitted by agencies and states participating in the UCR Program. Each agency or jurisdiction is uniquely identified in the collection by the UCR Originating Agency Identifier (ORI). In describing this data collection the terms agency, jurisdiction, and ORI are used synonymously. Detailed discussions of reporting procedures are found in the UNIFORM CRIME REPORTING HANDBOOK (Washington, DC: U.S. Government Printing Office, 1980), and in the codebooks for the ICPSR's Agency-level UCR data collections (see ICPSR 9028).

It should be emphasized that, while UCR staff were consulted in developing the new adjustment procedures, these UCR county-level files are not official FBI UCR releases and are being provided for research purposes only. Users with questions regarding these UCR county-level data files can contact the National Archive of Criminal Justice Data at the ICPSR.

BREAK IN SERIES

Two major changes to the UCR county-level files were implemented with the 1994 release data and are continued with the 2004 data. A new imputation algorithm to adjust for incomplete reporting by individual law enforcement jurisdictions has been adopted. Also, a new Coverage Indicator has been created to provide users with a diagnostic measure of aggregated data quality in a particular county. These developments are described in greater detail below. The changes were instituted in response to comments from a number of users and after almost a year of discussions by UCR file users, the Uniform Crime Reports Unit of the Federal Bureau of Investigation, the Bureau of Justice Statistics, and the Inter-university Consortium for Political and Social Research.

These changes will result in a break in series from previous UCR county-level files. Data from earlier year files should not be compared to data from 1994 and subsequent years. Changes in procedures used to adjust for incomplete reporting at the ORI or jurisdiction level may be expected to have an impact on aggregates for counties in which some ORIs have not reported for all 12 months. However, the new adjustment procedures should result in county-level data that are less sensitive to changes between years in the extent of reporting by ORIs within a county. Consequently, data from 1994 forward should be more accurate estimates for longitudinal analysis.

CHANGES IN IMPUTATION PROCEDURES FOR INCOMPLETE REPORTING

IMPUTATION PROCEDURES USED FOR 1977-1993 UCR COUNTY-LEVEL FILES: The data for any ORI reporting 12 months were used for county aggregation as submitted. Data for an ORI reporting six to 11 months were increased by a weight of [12/months reported]. Data for any ORI reporting less than 6 months were deleted from the county total, and the population served by that ORI was deleted from the county population total to help control for differential data quality across counties.

The aim of this procedure was to produce comparable data cross-sectionally across all counties. However, if there were major changes in the ORIs that reported in a county across years, artifactual changes in the longitudinal data for a county could be introduced because of potential variation in the type of ORIs used to compute imputed county totals and rates each year.

IMPUTATION PROCEDURES USED FOR 1994 UCR COUNTY-LEVEL FILES AND ONWARD: The data for any ORI reporting 12 months were used for county aggregation as submitted. Data for an ORI reporting 3 to 11 months were increased by a weight of [12/months reported]. For ORIs reporting 0 to 2 months in the arrest files or 1 to 2 months in the crimes reported files, data for these ORIs were set to zero and then data were estimated using rates calculated from ORIs reporting 12 months of data located in the ORI's geographic stratum based on UCR Population Groups within their state. UCR Population Groups are defined as follows:

```
Population Group
----------------
1) Cities 250,000 and over
2) Cities 100,000 - 249,999
3) Cities 50,000 - 99,999
4) Cities 25,000 - 49,999
5) Cities 10,000 - 24,999
6) Cities 2,500 - 9,999
7) Cities under 2,500
8) Non-MSA counties and non-MSA State Police
9) MSA counties and MSA State Police
```

There is an important distinction in estimation procedures for the arrest versus the crimes reported files. For the arrest files (Parts 1-3 and 5-7), data were estimated for agencies reporting 0-2 months based on the procedures mentioned above. However, due to the structure of the original data received from the FBI, ICPSR was only able to estimate data for agencies reporting 1-2 months in the crimes reported files (Parts 4 and 8). No estimations are provided for agencies reporting 0 months. To assist users, the county population figures and number of agencies reporting for both the arrest and crimes reported data files were added to the crimes reported files. These variables provide users with information that can be used to

determine the proportion of the population or agencies not included in the crime reported files due to the absence of records for agencies reporting 0 months. Users should keep in mind these differences when doing their analyses.

COVERAGE INDICATOR

For releases of UCR county-level files before 1994, data from jurisdictions reporting less than 6 months of data were not included in county totals in an effort to ensure cross-sectional data comparability and quality. With the new procedures to adjust for incomplete reporting, data will be provided for each active ORI that reports less than 12 months of data, whether through weighting of partial year data or substitution of a value based on population group and state. Instead of exercising an a priori judgment that 6 months of data is the minimum threshold for acceptable data quality, a new Coverage Indicator variable has been created that will allow users to set their own threshold for acceptable data quality and to include or exclude data based on the standards they set themselves. The Coverage Indicator variable represents the proportion of county data that is not imputed for a given year. The indicator ranges from 100, indicating that all ORIs in the county reported for 12 months in the year, to 0, indicating that all data in the county are based on estimates (as described above), not reported data. The Coverage Indicator is calculated as follows:

$$CI_x = \left(1 - \left(\sum_i \left(\frac{ORI\ pop}{county\ pop}\right)\left(\frac{12 - months\ reported}{12}\right)\right)\right) * 100$$

where CI = Coverage Indicator
x = county
i = ORI within county

Some ORIs do not have a population associated with their jurisdiction. These ORIs report for jurisdictions such as national parks, colleges and universities, toll bridges and tunnels, and most state police departments. As the coverage indicator is based on months of reporting and the population of each agency, this variable will not show estimation that did occur for statewide ORIs and for ORIs as listed above that do not have a population but reported 3 to 11 months of data. Conversely, the coverage indicator will indicate that estimation has occurred for ORIs with a population that reported 3 to 11 months of data even if the ORIs actually reported no crimes or arrests. Similarly, the coverage indicator will indicate that estimation had occurred for ORIs with a population that reported 0 to 2 months of arrest data and 1 to 2 months of crimes reported data, even though no rate was calculated to estimate data because of the lack of ORIs in the agency's geographic stratum reporting 12 months of data. Finally, since data for ORIs that reported 0 to 2 months of arrest and 1 to 2 months of crime are set to zero, users should be aware that no estimation of data was possible for ORIs in these categories without a population. In the crimes reported files, no estimation was possible for agencies

reporting 0 months because population figures for these agencies were not provided in the original files from the FBI.

COMPARING "CRIME IN THE UNITED STATES 2004" TO ICPSR 4466

"Crime in the United States 2004" is a publication prepared by the Federal Bureau of Investigation and provides estimations of national reported crime activity and arrest statistics from law enforcement agencies in the UCR Program. Users of this data collection prepared by ICPSR may not be able to match the statistics presented in "Crime in the United States 2004" due to several factors:

(1) The UCR staff continue to update agency records when additions or corrections are received by the UCR Program. The FBI statistics presented in "Crime in the United States 2004" are based on the data that the FBI has received prior to their established publication deadlines. The data used by ICPSR to prepare the data in ICPSR 4466 may contain additions or corrections to the data submitted to the FBI after their publication deadline for producing "Crime in the United States 2004."

(2) The new imputation algorithm that ICPSR implemented in 1994 approximates the estimation procedures that the FBI uses to adjust for incomplete or unreported data from individual law enforcement jurisdictions. Limited or no crime or arrest data were available for some states in 2004.  For some tables in "Crime in the United States 2004" (for example, Section II, Table 2: Total Crime Counts in the United States, and Section IV, Table 29: Estimated Arrests), the FBI provided estimated crime counts and arrest totals for some of these states (see Appendix I -- Methodology for the FBI's estimation methods). The ICPSR algorithm estimates data for agencies reporting less than three months of data by calculating rates from agencies reporting 12 months of data located in the agency's geographic stratum within that state. Since data for these states were very limited or not present in the original data, estimates for the entire state could not be produced by ICPSR.

(3) Some tables in "Crime in the United States 2004" were prepared using data only from agencies submitting complete reports for the 12 months for 2004 prior to the publication deadline (for example, Section IV, Table 69: Arrests by State). For this ICPSR data collection, all law enforcement agency records present in the original FBI data were used in the aggregation to the county level. County records with a coverage indicator value of 100 contain only 12-month reporting agencies (see last paragraph of the Coverage Indicator section in the Introduction for possible exceptions). Agencies reporting 12 months of data within a county with a coverage indicator value less than 100 cannot be separately identified in this dataset aggregated at the county level.

IDENTIFYING MISSING DATA

     In this data collection, zeroes may represent both true zeroes
or missing data, and it is possible to distinguish between the two.
In the arrest files (Parts 1-3 and 5-7), the coverage indictor alone
does not indicate whether or not zeroes are true or missing values. A
county can have a coverage indicator of zero, but still contain
arrest data. ICPSR can estimate arrest data for a county that did
not report any arrests based on data for other counties of comparable
population size in the same state that did report 12 months of data.

     In order to distinguish true zeroes from missing values, the
user has to look at the coverage indicator for a county in conjunction
with the arrest variables. If an arrest variable for a particular
county has a value of zero and the coverage indicator is greater
than zero, then the arrest variable contains a true zero. This true
zero is not necessarily a reported zero as it may have been estimated.
If an arrest variable for a particular county has a value of zero and
the coverage indicator for that county is zero, then the user must
check the values of ALL of the arrest variables.  If some arrest
variables contain zeroes and some contain other values, then the
zeroes for this county are true. If ALL arrest variables and the
coverage indicator for the county in question contain zeroes, then
these indicate missing data.

     In the crimes reported file (Part 4), data can not be estimated
for non-reporting agencies. Therefore, counties with no population for
reporting agencies will also have a coverage indicator of zero and
all crime variables will have a value of zero. These zeroes indicate
missing data. If a county has one or more offense variables with a
value of zero, but has a value of greater than zero for the
population and coverage indicator variables, then the zeroes for
these particular offense variables should be considered true zeroes
for the purposes of analysis.

                 SUMMARY OF HOW TO IDENTIFY MISSING DATA

              ARREST FILES          |      CRIMES REPORTED
         -------------------------------------------------------
                                    |
              Coverage indicator > 0 |  Coverage indicator > 0
                   or               |
 TRUE         Coverage indicator = 0 |
 ZERO         AND at least one arrest|
              count variable > 0    |
                                    |
         -------------------------------------------------------
                                    |
              Coverage indicator = 0 |  Coverage indicator = 0
 MISSING      AND all arrest count   |  AND all other crime count
  DATA        variables = 0          |  variables will necessarily = 0

NOTES ON FIPS CODES

   Cities designated by the Census Bureau as independent cities
are reported separately and have their own "county" codes (see
Appendix). Some jurisdictions, such as state parks and some state
police, provide data only on a statewide basis. In these cases,
data are allocated to counties proportionate to their share of the
total state population. Parts 5 to 8 contain the amount of
statewide data allocated to each county. To obtain the county
total without the statewide allocation, the statewide values can
be subtracted from the county data.

   State Police data for Vermont were not reported within a county
and the State Police data for Alaska and Connecticut are not allocated
to the counties. These three State Police records are identified by
the county code 999. In the 1997 data and onward another 999 county
code was added to these data files. The New York/New Jersey Port
Authority reported data in 1997 through two agencies, one in New York
and one in New Jersey. The FBI included the New York Port Authority
agency as part of New York county. However, the FBI did not assign a
UCR county code for the New Jersey Port Authority and did not provide
a population figure for the area covered by this jurisdiction.
Therefore, the New Jersey/New York Port Authority (NJNYPOA) is a
separate record in the data files from 1997 onward with a county code
of 999. This change increases the number of counties in this data
collection to 3,147.

   ICPSR uses FIPS Publication 6-4 "Counties and Equivalent Entities
of the United States, Its Possessions, and Associated Areas" from the
National Institute of Standards and Technology (NIST), U.S. Department
of Commerce, as a reference for assigning FIPS codes for the counties
in this data collection. ICPSR consults this publication annually to
note changes in FIPS codes that may affect this collection.

   The borough of Denali, Alaska (FIPS code 02068) was created from
part of the Yukon-Koyukuk Census Area (FIPS code 02290) and
unpopulated part of the Southeast Fairbanks Census Area (FIPS code
02240) effective December 7, 1990. The Denali Borough is NOT a
record in the data. However, since no agency record from Denali
was present in the original FBI data for either the arrest or
crimes reported files, no data are missing from the ICPSR data.

   In May 1995, NIST announced that the independent city of South
Boston, Virginia reverted to town status and became part of Halifax
County as of June 30, 1995. The Virginia FIPS county code of 780 no
longer exists and South Boston is included in FIPS county code 083.
ICPSR did not adjust this data collection to reflect this change so
that the data files would remain consistent with earlier years. Users
who wish to use the current FIPS codes can combine the data from
South Boston with Halifax County.

   In July 1999, NIST announced that Yellowstone National Park, which
had been treated as a county equivalent, is legally part of Gallatin
County and Park County, Montana. Yellowstone National Park was left as

a county equivalent in this data collection to remain consistent with earlier years.

In July 1999, NIST announced that as of November 13, 1993 Dade County, Florida officially changed its name to Miami-Dade County. The county was assigned a new FIPS code (086) to maintain the alphanumeric sequence of counties. In the 1997 data collection and onward, ICPSR also changed the Miami-Dade county code from 025 to 086 to match the change in the FIPS publication. However, the 1993-1996 UCR county-level data collections still used the old name and FIPS county code.

In July 2001, NIST announced that the independent city (county-equivalent) of Clifton Forge, Virginia, had reverted to town status, effective midnight, July 1, 2001. Clifton Forge is now an incorporated place within Alleghany County, rather than a separate county-equivalent surrounded by Alleghany County. This action will reduce the number of Virginia independent cities to 39 and the number of United States counties and equivalent areas to 3,141. The action reduces the total number of independent cities in the United States to 42. The FIPS county code of 560 for Clifton Forge, Virginia, is deleted. The FIPS-55 class code will change from C7 to C1. The census place code of 0285 and FIPS-55 code of 17440 are unaffected. The FIPS county code of 005 for Alleghany County remains unchanged. ICPSR did not adjust this data collection to reflect this change so that the data files would remain consistent with earlier years. Users who wish to use the current FIPS codes can combine the data from Clifton Forge with Alleghany County.

In January 2002, NIST announced that Broomfield County, Colorado, had been created from parts of Adams (001), Boulder (013), Jefferson (059), and Weld (123) counties effective November 15, 2001. The boundaries of Broomfield County reflect the boundaries of Broomfield city legally in effect on November 15, 2001. To maintain the alphanumeric sequence of counties, Broomfield County will have a code of 014 for FIPS 6-4, Counties and Equivalent Entities of the United States, Its Possessions and Associated Areas. ICPSR created county code 014 for Broomfield County to match the change in the FIPS publication.

ADDITIONAL NOTES

In the UCR county-level arrest files, the population and data for jurisdictions located in multiple counties are provided only in the county containing the largest population component of the jurisdiction. Counties containing smaller population components of multiple-county jurisdictions will contain no population or arrest data for these jurisdictions. Data in counties affected by one or more multiple-county jurisdictions are indicated by a multi-county jurisdiction flag variable. In the county-level crimes reported files, the population and crime data for jurisdictions located in multiple counties are provided by the UCR proportioned to each county (maximum of three) in which the jurisdiction is located.

Drunkenness (FBI offense code 23) is not considered a crime in some states. States that do not consider drunkenness a crime, but which report data through the NIBRS system, such as North Dakota, may show arrest data for the offense in this data collection. This is because drunkenness may be listed as an incident in the NIBRS reporting system, even though there was technically no arrest in these states. Agencies in states where drunkenness is not a crime may use their own discretion in reporting drunkenness as an incident. Users should exercise caution when analyzing this variable because of these differences in reporting.

The original data from the FBI contain one record for New York City. Data from New York City are allocated into New York City's five counties on the basis of the proportion of the population in each county. For example, the population for Queens county is divided by the total population of New York City and the resulting proportion is multiplied with data from each of New York City's arrest and offense categories to apportion data to Queens county. Population estimates for July 1, 2004 from the U.S. Census Bureau were used to calculate these proportions. The population of Goodletsville City, Tennessee is proportioned to both Davidson County and Sumner Couty. Population estimates for July 1, 2002 from the U.S. Census Bureau were used to calculate the population breakdown of Goodletsville, Tennessee.

Six dummy records were created for the arrest data files and 157 dummy records were created for the crimes reported data files for counties not represented in the original FBI file. These county records provide only the state and county FIPS codes with the rest of the variables following county FIPS in the data file filled with zeros. No arrest data were provided for Florida. Limited arrest data were available for Illinois and Kentucky. Limited crimes reported data were available for Illinois, Kentucky, Mississippi, Montana, and North Dakota.

One SPSS data definition statement file and one SAS data definition statement file are provided for the one arrest data file (all ages) and one SPSS data definition statement file and one SAS data definition statement file are provided for the crimes reported data file (crimes reported). One SPSS data definition statement file and one SAS data definition statement file are provided for the one allocated statewide data for arrests files and one SPSS data definition statement file and one SAS data definition statement file are provided for the allocated statewide data for crimes reported file. The arrest data file has 56 variables, the crimes reported data file has 21 variables, the allocated statewide data for arrests file has 57 variables and the allocated statewide data for crimes reported file has 22 variables. All data files contain 3,147 cases.
